## Additional Contact Information

- Website: <https://dev-uthman.vercel.app/>
- Github: <https://github.com/codetesla51>

---

## Education

University of Ilorin

11/23 - 01/27

B.Sc. Ed Computer Science - 4.0

- Relevant Coursework: Programming Principles, Database Management, Educational Technology

---

## Projects

swift2FA

11/24 - 11/24

- Swift2FA is a secure and easy-to-use PHP library for the fast implementation of two-factor authentication. It supports a variety of methods, including authentication via any authenticator app like Google Authenticator, via email using SMTP with PHPMailer, and now also supports SMS-based authentication using services like Twilio.

Vaultx

10/24 - 10/24

- VaultX is a secure file encryption and decryption platform built with Laravel and Axios. It utilizes AES 256 encryption to ensure your files remain protected. With VaultX, users can encrypt files, share them securely with others (even non-registered users), and decrypt them when needed. Files are handled with the utmost care, leaving no traces after decryption.
